

Lipid Programme Pilot Study

New analytes: sdLDL, ApoA II, ApoC II ApoC III, ApoE

Dear Participant

As part of our continuing development of **Thistle QA**, we are planning to launch a pilot study for additional analytes on the Lipid Programme. This will be run over the forthcoming cycle(s) to determine feasibility.

We would like to know how many participants would be interested in running the following parameters – sdLDL, ApoA II, ApoC II, ApoC III, and ApoE. You will be able to register for these parameters at no extra cost if you are a current participant on our Lipid programme.

If you are interested in running these parameters please fill in the section at the bottom of this letter giving as much information as possible and return it to **Thistle QA** as soon as possible.

If you have any questions or comments, please do not hesitate to contact us.

Yours sincerely,

Debbie Moosa
General Manager

Lipid Programme Pilot Study - Registration of methods

Lab Reference Number / QA Number: _____

Lab Name: _____

Please state the following:-

Analyte	Method	Instrument	Reagent	Units
sdLDL (small dense LDL)				
ApoA II				
ApoC II				
ApoC III				
Apo E
