

Haematology Information - Please read this:

Important Additional Information:

At the request of customers, samples for the new cycle of the Haematology programme will be presented in 2ml primary tubes from March 2008. The advantages for participants are that:

- *These tubes have pierce able tops and can be placed directly on to many analysers.
- *The new tubes will speed up sample preparation and improve laboratory safety for many systems since no de-capping or decanting is required.
- *The sample matrix will more closely simulate real patient samples for enhanced performance on more systems.
- *Due to supply in primary tubes it is necessary to supply the material every 3 months!
- *The second shipment will automatically be despatched end of May 2008 with the next 3 months samples!

Please call Thistle QA if you have any questions regarding the above information.

Regards,

Marlize Albertse
